

DevTools CLI Bundle

5 Zero-Dependency CLI Tools for Developers

Five zero-dependency Python CLI tools. No external dependencies beyond stdlib. Install individually or as a bundle.

1. CSV to JSON Converter

Convert CSV files to JSON with flexible options

Install

```
pip install csv-to-json-converter
```

Usage

```
csv-to-json input.csv output.json
csv-to-json input.csv - --pretty # stdout, pretty print
csv-to-json data.csv out.json --no-header # no header row
```

Options

- --pretty Pretty-print JSON output
- --no-header First row is data, not headers
- --delimiter , Custom delimiter (default: comma)
- -o, --output Output file (default: stdout)

2. PDF Merger

Merge multiple PDF files into one

Install

```
pip install pdf-merger-cli
```

Usage

```
pdf-merger file1.pdf file2.pdf -o merged.pdf  
pdf-merger *.pdf -o combined.pdf
```

Options

- -o, --output Output filename (required)

3. Image Batch Processor

Batch resize, convert, rename images

Install

```
pip install image-batch-processor
```

Usage

```
img-batch *.png --resize 800x600 --out ./out
img-batch photos/ --convert webp --quality 85
img-batch *.jpg --rename "img_{:03d}" --out ./renamed
```

Options

- --resize WxH Resize (e.g. 800x600)
- --convert FMT Convert format (webp, png, jpg)
- --quality N Quality 1-100 (default: 85)
- --rename PAT Rename pattern with {:03d}
- --out DIR Output directory (required)

4. JSON to YAML Converter

Convert JSON files to YAML format

Install

```
pip install json-to-yaml-converter
```

Usage

```
json-to-yaml input.json output.yaml  
json-to-yaml data.json - # stdout  
json-to-yaml config.json --indent 4
```

Options

- --indent N YAML indent spaces (default: 2)
- -o, --output Output file (default: stdout)

5. REST API Generator

Generate FastAPI boilerplate from OpenAPI spec

Install

```
pip install rest-api-generator
```

Usage

```
rest-api-gen spec.yaml --out ./api
rest-api-gen spec.json --framework fastapi
rest-api-gen spec.yaml --docker
```

Options

- --framework fastapi (default) or flask
- --out DIR Output directory (required)
- --docker Generate Dockerfile + compose
- --tests Generate pytest stubs

Troubleshooting & Tips

ModuleNotFoundError

Reinstall with: `pip install --force-reinstall --no-deps <pkg>`

Permission denied

Run: `pip install --user <pkg>` or use `virtualenv`

Command not found

Add `~/.local/bin` (Linux/macOS) or `%APPDATA%\Python\Scripts` (Windows) to `PATH`

PDF merge fails

Ensure PDFs are not password-protected or corrupted

Image conversion fails

Install Pillow: `pip install Pillow` (required for image tools)

YAML output issues

PyYAML required: `pip install PyYAML` (stdlib fallback used if missing)
